XPedite6032

The XPedite6032 is a high-performance conduction- or air-cooled 3U CompactPCI (cPCI) module that dissipates less than 18 W and is capable of operating at up to 85°C at the external thermal interface without forced air flow (conduction-cooled version) or up to 55°C ambient air temperature with 300 LFM airflow (air-cooled version). The XPedite6032 can also host one single-width conduction-cooled PMC or standard air-cooled PMC. The XPedite6032 is tolerant of 40 g peak/6 ms half sine shock, random vibration of 0.1 g²/Hz from 50 to 2000 Hz, and swept sinusoidal vibration of 0.06 inch/10 g peak amplitude from 10 to 500 Hz.

The XPedite6032 utilizes the Freescale MPC7447A/7448 embedded processor and Marvell Discovery III system controller and provides up to 512 MB DDR-266 SDRAM, up to 128MB of NOR flash, two RS-232/RS-422 serial ports, a 33/66 MHz cPCI interface and 66/100/133MHz PCI-X PMC interface. The serial and two Gigabit Ethernet interfaces are accessible through the backplane J2 connector along with a subset of the PMC's P14 I/O. The XPedite6032 can be built as a system or peripheral cPCI module.

The XPedite6032 is ideal for 3U cPCI applications in commercial or extended temperature, shock, and vibration environments that require high bandwidth and processing performance.
